PROFESSIONAL SUMMARY

Cybersecurity Engineer specialized in Security Operations (SecOps), penetration testing (Web and Host). Proven expertise in automating security reconnaissance using Python and Bash within a customized Linux environment. Dedicated to continuous professional development through platforms like Hack The Box and PortSwigger, with a strong foundation in computer science and international security certifications.

CERTIFICATIONS

- CompTIA Security+ | CompTIA
- MCSE (Microsoft Certified Systems Engineer) | Microsoft
- MCSA (Microsoft Certified System Administrator) | Microsoft
- In Progress: Strategic preparation for OSCP.
- TOT Certified | Arab Centre HD

PROFESSIONAL EXPERIENCE

Network Administrator | FUTURE VISION | 01/2022 - Present

- Infrastructure Management: Managed and optimized full-scale network infrastructure, ensuring high availability and 99.9% uptime for core business services.
- Server Administration: Installed, configured, and maintained Windows Server environments, including DNS, DHCP, and Active Directory, to streamline identity and access management. Technical Support: Resolved complex hardware, software, and network connectivity issues for 50+ workstations, improving overall office productivity.
- Security Alignment: Implemented security best practices for internal networks, including routine patching and system hardening to mitigate potential vulnerabilities.

Cofounder - IT Manager | STOONX TRAINING | 10/2018 – 10/2021

- Infrastructure Management: Managed and optimized full-scale network infrastructure, ensuring high availability and 99.9% uptime for core business services.
- Instructor for Stock Markets Courses.
- Managing the training team and instructors

Network Administrator | SYMMETRIC ITS | 12/2009 – 09/2018

- Network Troubleshooting: Identified and resolved critical network bottlenecks and connectivity failures, maintaining stable communication channels across the enterprise.
- Server Infrastructure: Supported the rollout of server-side technologies for external clients, ensuring robust configurations for directory services and network protocols.
- Client Relations: Provided high-level technical consultancy and on-site support, effectively managing client expectations and delivering tailored infrastructure solutions

Network Administrator | TATWIR ITS |01/ 2007 – 11/2009

- Outsourced Network Support: Delivered specialized technical support for multiple client organizations, managing diverse network architectures and ensuring seamless connectivity. Active Directory Implementation: Led the deployment of Active Directory services and Group Policy Objects (GPOs) to centralize user management and enhance organizational security posture.
- Server Deployment: Orchestrated the installation and support of critical network servers (DNS/ DHCP)
- Optimizing traffic flow and IP address management for outsourcing partners.

Network Administrator & Technical Support | Synergy PS | 08/2003 – 09/2005

- Network Troubleshooting: Identified and resolved critical network bottlenecks and connectivity failures, maintaining stable communication channels across the enterprise.
- Server Infrastructure: Supported the rollout of server-side technologies for external clients, ensuring robust configurations for directory services and network protocols.
- Client Relations: Provided high-level technical consultancy and on-site support, effectively managing client expectations and delivering tailored infrastructure solutions

EDUCATION

Bachelor of Computer Science and Information Technology

October 6 University | https://o6u.edu.eg/

Comprehensive study of ICT fundamentals, networking, and software development

TECHNICAL PROJECTS & IDENTITY TECHNICAL PROJECTS | OOPSSEC

- Developed a suite of custom Python and Bash scripts for automated reconnaissance, parameter fuzzing, and directory discovery.
- Designed and maintained a high-performance security lab on hardware, optimized for virtualization and intensive security testing.
- Actively contribute to the cybersecurity community through methodology research on platforms including TryHackMe, PortSwigger Academy, and PentesterLab.

Technical Skills Core Cybersecurity

- Vulnerability Assessment: Comfortable with testing methodologies using Burp Suite, Nmap, and Ffuf.
- Security Automation:

Scripting in Python, Bash, for reconnaissance and fuzzing.

Environment Management: Proficient in Arch Linux (Hyprland/Hyde), Ubuntu, and Windows Server (Active Directory, DNS, DHCP).

- Platform Expertise:

Active researcher on Hack The Box, TryHackMe, and PortSwigger Academy.

Operational & Professional Competencies

- **Corporate Communications**
    - Professional fluency in English with experience in technical reporting and cross-team collaboration.
    - Analytical Problem Solving
    - Proven ability to troubleshoot complex network bottlenecks and identify high-severity security vulnerabilities.
- **Organizational Management**
    - Strong time management skills applied to managing multiple outsourcing client networks and long-term security projects.
- **Technical Documentation**
    - High attention to detail in system hardening, patch management, and maintaining professional lab environments.
    - Explain complex technical concepts to non-technical audiences—a key skill for PenTest reporting
    - Can prepare a training package and implement it with the team
